Summary

Senior software engineer with 5+ years building full-stack products, now leading AI agent development at a fast-growing B2B SaaS company. I've shipped production LLM agents, made a core search path almost 4x faster, and lead a team of 5 engineers – while staying hands-on with React, Node.js and AWS.

Skills

AI / GenAI: LLM Agents, Agentic Workflows, LangGraph, RAG & Vector Search, Prompt Engineering, LLM Evaluation, Langfuse, OpenTelemetry, Computer Vision / OCR

Backend & Data: Node.js, TypeScript, NestJS, Python (FastAPI), PostgreSQL, Prisma, GraphQL (Hasura), REST APIs

Cloud & DevOps: AWS (ECS, Lambda, S3, Amplify), Docker, CI/CD (GitHub Actions), Monitoring & Observability

Frontend: React, Next.js, TypeScript, Redux Toolkit, Micro-Frontends, Vite

Engineering: System Design, Event-Driven Architecture, Multi-Tenant SaaS, RBAC, Test & Eval-Driven Development

Experience

Zotok.ai – Senior Software Engineer (AI & Full-Stack)

May 2023 – Present

Hyderabad. B2B WhatsApp-commerce SaaS; customers include Sun Pharma, UltraTech, ITC, Johnson & Johnson, Veeva

- Redesigned Zotok's WhatsApp AI ordering agent, breaking one black-box model into **7 independent, reconfigurable steps** on a visual workflow builder – so the team can change how the agent behaves for a new customer without touching code. Now live in production across multiple enterprise accounts
- Built a smarter product-matching engine that understands the shorthand and typos reps actually type – **cut mismatched or unrecognized products by over 70%**, tested against a live database of 15,000+ product aliases
- Built an automated testing pipeline for the AI agent covering 60+ real order scenarios, running **twice a day, every day** (700+ automated checks a year) with instant Teams alerts when quality drops – catching issues before customers do
- Made product search in the ordering pipeline **almost 4x faster** in production with no change in results, by trimming the data each search call pulls back
- Built several customer-facing flows end to end – WhatsApp buttons that deep-link straight into the right page, secure one-time payment and statement links, and a full migration of the customer web app to **Next.js 15**
- Hardened the messaging service to stay reliable under heavy load, and built safeguards so customers never receive duplicate WhatsApp notifications
- Promoted to Engineering Lead within the first year. Manage a team of 5 – turning business requirements into technical plans, reviewing designs and code, and owning delivery end to end; hired 3 of the team's engineers

Sumeru Software – Senior Developer

Aug 2022 – Jan 2023

- Built a role-based CRM from the ground up (React, Redux Toolkit, Node.js) with custom dashboards per permission level – owned it end to end and shipped the MVP in 4 months with a team of 4

Aerchain – Software Development Engineer 1 (converted from intern)

Jul 2019 – Jan 2022

- Built a real-time auction system with optimistic UI updates, and a barcode-based inventory tracker that kept working offline

Projects

RoleMiner – AI-powered job discovery tool

Python, FastAPI, scikit-learn, React, Docker

- Scrapes job listings from 5 sites, ranks them automatically, then uses an LLM to score fit – a staged pipeline keeps a full run under \$0.002

Education

B.E. (Hons) Mechanical Engineering, BITS Pilani

2016 – 2020
