Summary

AI full-stack engineer with 5 years across React/TypeScript, Node/NestJS and AWS. I design and ship production AI agents end to end, with the evaluation and tracing that keep them reliable. AI engineering since 2024.

Skills

AI: LLM agents, tool calling, multi-agent, LangGraph, RAG and vector search (OpenSearch), evaluation, tracing (OpenTelemetry, Langfuse)

Backend: Python, FastAPI, Node.js, NestJS, PostgreSQL

Frontend: React, Next.js, TypeScript

Cloud: AWS, Docker, GitHub Actions

Experience

Zotok.ai – Senior Software Engineer (AI & Full-Stack)

May 2023 – Present

Stack: LangGraph, Python, TypeScript, NestJS, PostgreSQL, OpenSearch, React, Next.js, AWS

- Designed a configurable WhatsApp order agent (LangGraph): one black box became **seven testable steps** on a visual builder, so per-customer changes ship without code or a redeploy
- Designed the multi-agent layer of the WhatsApp sales agent (LangGraph): messages route between service and payment agents, and a guardrail classifier filters spam, auto-replies and off-topic chat before the model answers
- Built a product-matching engine for shorthand order text over **15,242 production aliases**: the correct first match rose from **69% to 78%** in testing and from **81% to 95%** on real rep messages
- Built the evaluation system for the order agent: **64 real scenarios** graded line by line against the correct products, run twice daily with Teams alerts; it repeatedly caught breakages from other teams' backend changes before production
- Built end-to-end tracing (OpenTelemetry, Langfuse) for the agent runtime, so a failed AI order is debugged on one screen instead of in server logs
- Built the agent's knowledge search (OpenSearch vector search, LiteLLM embeddings) with per-customer isolation, so every customer's answers come only from their own documents
- Built image-to-order: photos of handwritten order sheets become carts through OCR and product matching, at **88% line accuracy** on a 378-line test set
- Built end to end in **2.5 weeks**: a WhatsApp workflow (agent, backend, web app) that replaced a plant's offline pour and dispatch forms; over **3,800 pour cards and 1,900 dispatches** captured since launch
- Built the order service behind the agent (NestJS, PostgreSQL): over 50 typed functions on one shared contract, with product search **4x faster** (875 to 228 ms per line)
- Cut first page load from **15–30 seconds to about 1.5 seconds** by removing unused mobile code, rebuilding the bundler config and lazy loading; builds got **30–40% faster**

Sumeru Software – Senior Developer

Aug 2022 – Jan 2023

- Built a role-based CRM from scratch (React, Redux Toolkit, Node.js) with permission-based screens and modular dashboards; owned it from kickoff to production and shipped the **MVP in 4 months** with a team of 4

Aerchain – Software Development Engineer

Intern Jul 2019 – Jul 2020; SDE 1 Apr 2021 – Jan 2022

- Built the real-time auction module for a B2B procurement platform, with an optimistic UI that reconciles with the server so bids feel instant and stay correct
- Built barcode-scan inventory management as an offline-first PWA (service workers) that keeps working without a connection

Education

B.E. (Hons) Mechanical Engineering, BITS Pilani

2016 – 2020
